PROJECTS

As an aspiring front-end developer and designer, I've got a lot of projects, codes and designs done and put together in my GitHub account serving also as my portfolio by now.

- **Tasko** – basic task list mobile application created in react native and pure CSS designing. Plus, with a basic operation of CRUD of external API.
- **Astigers** – an educational 2D android mobile game about learning of positive and negative integers and created in Unity
- **Axion** – A fully responsive web application project or capstone, created with Sveltekit, Bulma and Svelte-Materialify for the front and themes and by Prisma and Kit from SvelteKit as the server back-end works. (<https://www.axion.social>)
- **CnHClothing** – a pseudo clothing shop website with pseudo payment enabled using WordPress.
- **100secondsLifeGame** – A basic 2D game made in Unity as part of my portfolio and subject completion.
- **Laundry System** – a simple program for washing clothes machine (washing machines) based on java
